

Healthy Home Carpet Care

Consumer Household Spotting Guide

- A. Apply a small amount of dry cleaning solvent (available at grocery, drug and hardware stores). Use small amounts to prevent any possible damage to sizing, backings, or stuffing materials. Do not use gasoline, lighter fluid or other flammables.
- B. Mix one teaspoon of white neutral detergent (a mild dish washing detergent containing no strong alkalies or bleaches) with a cup of lukewarm water.
- C. Mix one tablespoon of household ammonia with a half cup of water.
- D. Mix one third cup of white household vinegar with two thirds cup of water.
- E. Mix a solution of powder enzyme laundry detergent following label of box directions. Allow the solution to remain on the stain for the length of time recommended by the manufacturer.

Note: Never mix ammonia and bleach during any cleaning operation. Apply with towel and blot only. Always test solution in an inconspicuous area of carpet to determine safe application. Rinse thoroughly to prevent detergent residue.
